INTERVIEW READINESS ROADMAP

4-Week Accelerated Interview Roadmap

For candidates with 12-15 focused hours per week and an active application timeline

A workload-aware sequence that turns Vault content into practice evidence, checkpoints, and escalation decisions.

VERSION 0.1-PILOT

PACE 12-15 FOCUSED HOURS / WEEK

FORMAT WEEKLY PLAN + CHECKLIST

STATUS HUMAN REVIEW REQUIRED

ROADMAP / 12-15 HOURS PER WEEK

00 START HERE

Who this track is for

- [ ] You can write working code in your interview language without syntax lookup.
- [ ] You already know basic arrays, strings, hash maps, trees, and graph traversal.
- [ ] You can protect at least five focused sessions per week.

OPERATING RULE

Use the diagnostic to move effort between DSA, system design, and behavioral work; do not add hours blindly.

PAID-TIER DISCLOSURE

AI Prep and 1:1 Premium are paid upgrades and are not included in the Vault.

Score the same six dimensions

Dimension	Weekly evidence
Problem recognition	0 = blocked | 1 = inconsistent | 2 = reliable
Correctness and edge cases	0 = blocked | 1 = inconsistent | 2 = reliable
Complexity explanation	0 = blocked | 1 = inconsistent | 2 = reliable
System design structure	0 = blocked | 1 = inconsistent | 2 = reliable
Behavioral evidence	0 = blocked | 1 = inconsistent | 2 = reliable
Communication under time pressure	0 = blocked | 1 = inconsistent | 2 = reliable

W01 WEEKLY FLIGHT PLAN

Diagnose, compress the basics, and build an error loop

Vault route

VIDEO	dsa_hash-maps_01.mp4
VIDEO	dsa_two-pointers_01.mp4
VIDEO	dsa_sliding-window_01.mp4
PDF	dsa_hash-maps.pdf
PDF	dsa_two-pointers.pdf
PDF	dsa_sliding-window.pdf
PDF	operations_error-log.pdf
TEMPLATE	template_behavioral-story-bank.docx

Practice targets

- [ ] Complete one 45-minute mixed DSA diagnostic without notes.
- [ ] Solve 18 problems: 6 hash-map/counting, 6 two-pointers, 6 sliding-window.
- [ ] For every miss, log the cue you overlooked and the invariant you needed.
- [ ] Draft four STAR stories: impact, conflict, failure, and ownership.

Checkpoint self-assessment

- [ ] Can you classify at least 8 of 10 array/string prompts within two minutes?
- [ ] Can you state the window or pointer invariant before coding?
- [ ] Do at least three STAR drafts contain a measurable result?

DECISION RULE

If recognition is below 8/10, repeat the three pattern sheets before adding advanced topics.

W02 WEEKLY FLIGHT PLAN

Search, trees, graphs, and system design structure

Vault route

VIDEO	dsa_binary-search_01.mp4
VIDEO	dsa_dfs_01.mp4
VIDEO	dsa_bfs_01.mp4
VIDEO	sysdesign_load-balancing_01.mp4
VIDEO	sysdesign_caching_01.mp4
PDF	dsa_binary-search.pdf
PDF	dsa_dfs.pdf
PDF	dsa_bfs.pdf
PDF	sysdesign_load-balancing.pdf
PDF	sysdesign_caching.pdf

Practice targets

- [ ] Solve 20 problems: 6 binary search, 7 tree traversal, 7 graph traversal.
- [ ] Write two 35-minute system designs using requirements, estimates, APIs, data, architecture, and bottlenecks.
- [ ] Re-solve five Week 1 misses from a blank editor.
- [ ] Speak two STAR answers aloud and trim each to two minutes.

Checkpoint self-assessment

- [ ] Can you choose DFS versus BFS and explain why?
- [ ] Can you structure a system design for 10 minutes before drawing components?
- [ ] Is your repeat-miss rate below 25 percent?

DECISION RULE

If fundamentals are sound, schedule the first full mock for Week 3.

W03 WEEKLY FLIGHT PLAN

Advanced patterns, applied design, and the first full simulation

Vault route

VIDEO	dsa_heap-priority-queue_01.mp4
VIDEO	dsa_intervals_01.mp4
VIDEO	dsa_dynamic-programming-1d_01.mp4
VIDEO	sysdesign_url-shortener_01.mp4
VIDEO	sysdesign_rate-limiter_01.mp4
PDF	dsa_heap-priority-queue.pdf
PDF	dsa_intervals.pdf
PDF	dsa_dynamic-programming-1d.pdf
PDF	sysdesign_url-shortener-walkthrough.pdf
PDF	behavioral_translate-indian-titles.pdf

Practice targets

- [ ] Solve 20 problems: 6 heap, 6 intervals, 8 one-dimensional DP.
- [ ] Complete one 45-minute DSA mock and one 45-minute system design mock.
- [ ] Write and record a 90-second explanation of your current role for a US interviewer.
- [ ] Repair every mock miss within 24 hours, then re-run the weak segment.

Checkpoint self-assessment

- [ ] Can you reach a correct approach within 10 minutes on medium DSA prompts?
- [ ] Can you identify a bottleneck and defend one tradeoff in system design?
- [ ] Can a listener understand your title, scope, and impact without knowing your employer?

PAID CHECKPOINT: AI PREP

You are ready for timed repetition and objective feedback across full mocks. Paid checkpoint: add AI Prep this week for repeatable mock loops. It is optional and not included in the Vault.

DECISION RULE

Two weak mocks in the same dimension means narrow the next week to that dimension; do not increase topic breadth.

W04 WEEKLY FLIGHT PLAN

Company calibration, full loops, and interview-day control

Vault route

PDF	company_master-index.pdf
PDF	behavioral_final-review.pdf
PDF	operations_interview-day.pdf
PDF	operations_post-interview-debrief.pdf
TEMPLATE	template_recruiter-screen-notes.docx
TEMPLATE	template_weekly-prep-tracker.docx

Practice targets

- [ ] Choose one evidence-approved company bank and complete a targeted 10-question sample.
- [ ] Run two full loops on separate days: DSA, system design, and behavioral.
- [ ] Re-solve the top 10 errors from the month without notes.
- [ ] Prepare interview logistics, questions, time-zone confirmation, and backup connectivity.

Checkpoint self-assessment

- [ ] Are two consecutive mock scores at or above your chosen readiness threshold?
- [ ] Can you finish medium DSA prompts with tests and complexity inside 40 minutes?
- [ ] Can you deliver six distinct behavioral stories without forcing one story into every question?

PAID CHECKPOINT: 1:1 PREMIUM

A high-stakes interview is near, or the same material weakness remains after two repaired AI mocks. Escalation checkpoint: consider a paid 1:1 Premium session for a persistent, specific gap. Capacity is limited; do not buy it merely to add more practice volume.

DECISION RULE

Apply or interview when the evidence is consistent. If one dimension remains weak, delay only the weakest interview type where possible.

END COMPLETION GATE

Evidence to leave with

- [ ] 58 new DSA problems plus deliberate re-solves
- [ ] Four system design write-ups
- [ ] At least three full mocks
- [ ] Six reusable behavioral stories
- [ ] A documented error log with repaired repeat misses

Upgrade ladder

AI Prep / INR 1,999-2,999

+ Paid AI mock-interview practice with repeatable feedback loops

+ Use when repetition and feedback are the bottleneck.

1:1 Premium / INR 9,999-14,999

+ Capacity-limited human coaching for persistent or high-stakes gaps

+ Use when a repaired, specific gap persists or stakes are unusually high.

GUARDRAIL

A purchase is not a readiness signal. Improved performance on repaired mocks is.

Human review required

Verify workload realism, asset availability, tier pricing, upgrade wording, and every cross-reference before publishing.
